

Delaware Energy Services - Expansion Plans for Produced Water Disposal in Southeastern New Mexico

For Immediate Release

Release No. 18-11-06
November 6th, 2018

Delaware Energy Services (DES), a commercial produced water disposal and water reuse company operating in Eddy and Lea Counties of New Mexico, recently announced plans to expand its operations in New Mexico. This expansion is an extension of the company's effort to serve the needs of oil and gas companies operating in Southern New Mexico.

The Delaware Energy Services team has already successfully drilled and completed seven Devonian SWD wells on budget and on schedule, with a combined disposal capacity of 200,000 barrels of water per day (BWPD). Delaware is drilling additional SWD wells, installing pipeline systems, and developing water reuse/recycling with the ability to reuse and dispose of 600,000 BWPD.

Delaware Energy Services is an affiliate of Delmar Systems, Inc., an established 50-year-old company serving the global oil and gas industry with operational and technical expertise. **John Shelton, Vice President of Technical Services for Delmar**, said "DES has achieved a strong position in produced water disposal capacity and is now adding water recycling and reuse capability to meet its customers needs. The Delmar Technical Team is leading the effort to utilize the most efficient methodologies for this water reuse service."

Delaware's Vice President of Operations Mike McCurdy commented, "I am excited about working with operators to provide reliable produced water reuse and disposal in New Mexico and I look forward to remaining a leader in produced water management for decades to come."

The Delaware Energy Services expansion is beginning November 2018 and is expected to continue through 2020.

End

About Delaware Energy Services

Delaware Energy Services provides operators with reliable, cost-effective solutions for produced water gathering, reuse and disposal. Serving customers throughout Southeastern New Mexico, DES is focused on superior service with safety and environmental responsibility while meeting the unique needs of each customer.
